

- **Nozzle kit** optimizes the ability to direct cool air precisely where needed.
- **Ceiling discharge kit** allows condenser-air to be vented to the plenum area above a suspended ceiling.
- **Condenser return-air plenum** allows supply-air to be ducted to the condenser coil.
- **Evaporator return-air plenum** allows supply-air to be ducted to the evaporator coil.
- **Supply-duct adapter** allows user to connect ductwork to unit's cold-air discharge.
- **Condensate pump kit** automatically removes evaporator-coil condensation allowing continuous unit operation.
- **Cord kit** simplifies wiring for model TZ-60 by providing a plug and socket assembly that is wired directly to unit and main power source allowing user to plug and unplug unit for maintenance or storage.
